AUTOMATION & ENERGY

Smarter Buildings,
Greater Efficiency.

About Airmaster
Automation & Energy

At Airmaster, we specialise in intelligent automation and energy solutions that make buildings smarter, more efficient, and future-ready. From cutting-edge Building Management Systems (BMS) to IoT integrations and energy optimisation, we provide the technology and expertise to improve building performance across Australia.

As Australia's first authorised Tridium Systems Integrator & Developer, Airmaster has deep expertise in the world's leading vendor-independent BMS platform. Tridium streamlines operations by consolidating multiple systems into a single interface. We're also a Platinum Partner for Distech Controls, reinforcing our commitment to delivering vendor-agnostic, world-class solutions tailored to client needs.

Our Automation & Energy solutions are delivered nationally, with expert local teams backed by a centralised network of product and technical specialists to ensure consistent service and performance.

Our Services and Solutions

Building Automation Solutions

We design and implement Building Management Systems (BMS) that give you total control over your building's performance. Our smart automation solutions help reduce costs, improve efficiency, and enhance comfort for occupants.

BMS Maintenance & Service

Reliable 24/7 support ensures your BMS remains secure, efficient, and operational. Our proactive maintenance, remote monitoring, and cloud-based analytics help prevent issues before they happen, maximising system lifespan.

System Design & Installation

We deliver custom BMS solutions for new buildings and retrofit projects. Whether upgrading a legacy system or designing from scratch, our expert team ensures seamless integration, improved performance, and long-term flexibility.

IoT & Systems Integration

We connect disparate building systems - HVAC, lighting, security, and energy metering, into a unified, intelligent network. Our IoT-driven approach allows for smarter automation, improved data insights, and future-ready buildings.

Energy Management & Comfort Optimisation

We help you reduce energy consumption through advanced analytics and intelligent control strategies. Our optimisation solutions maximise efficiency, lower costs, and support sustainability goals.

Lighting Control Solutions

Our customised lighting systems enhance energy efficiency, comfort, and adaptability. From automated schedules to daylight-responsive controls, we design solutions that integrate seamlessly with your BMS.

Access Control & Cybersecurity

Security is at the heart of smart buildings. We provide advanced access control and cybersecurity solutions to safeguard your building's systems, ensuring compliance and protecting against unauthorised access.

BMS Asset Management

Our BMS lifecycle management platform tracks and monitors critical system components, helping you plan upgrades, forecast costs, and maintain performance over time.

Our People

Airmaster is an industry leader with a 1200+ strong workforce made up of technicians, apprentices, engineering and support staff.
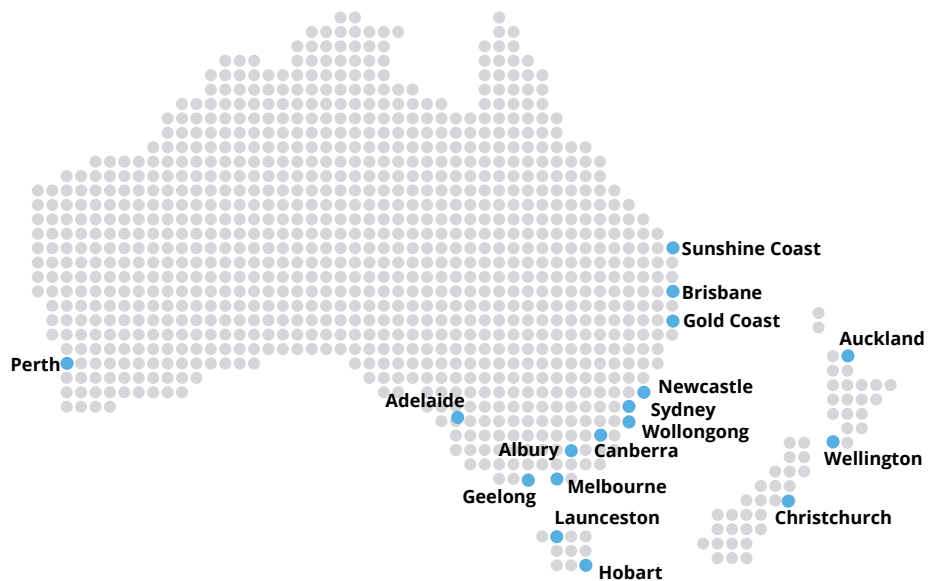

590+ Technicians

120+ Apprentices

470+ Corporate Engineering

Perth

Adelaide

Albury

Geelong

Melbourne

Launceston

Hobart

Sunshine Coast

Brisbane

Gold Coast

Newcastle

Sydney

Wollongong

Canberra

Auckland

Wellington

Christchurch

Our Markets

Airmaster delivers services and solutions across a broad range of market sectors. With over 35 years of experience, we have technical and sector-specific experts and knowledge on-hand achieving bespoke, specialised results for all facility types.

- Education
- Transportation
- Retail Facilities
- Commercial Office Buildings

- Aged Care
- Industrial
- Healthcare
- Data Centres

- Recreational Facilities
- Warehouses
- Government
- Hospitality

Our Partners &
Technology Integrations

Our factory-trained Automation & Energy team are able to redefine what is possible when integrating disparate technologies in buildings. These technologies enable entire buildings to constantly improve in operation, efficiency and innovation by consolidating multiple systems into a single platform.

Airmaster has partnered with the world's industry-leading BMS Integrators and Technologies to offer our clients a comprehensive range of solutions that are fully customisable with an energy efficient approach.

Tridium

"Tridium's Niagara Framework is a truly open environment that harnesses the power of the Internet of Things in ways never before imagined or possible."

Tridium's Niagara Framework has fundamentally changed the way devices and systems connect to people - and the ways people can control and optimise those machines.

With more than a million instances worldwide, Niagara has become the leading operating system of the Internet of Things. Niagara enables you to connect and control devices, while normalising, visualising and analysing data from nearly anywhere or anything.

From buildings and data centres, to manufacturing systems and smart cities, the Niagara Framework improves strategic decision-making, allowing for optimised performance and cost reductions that can help businesses be more competitive and more profitable.
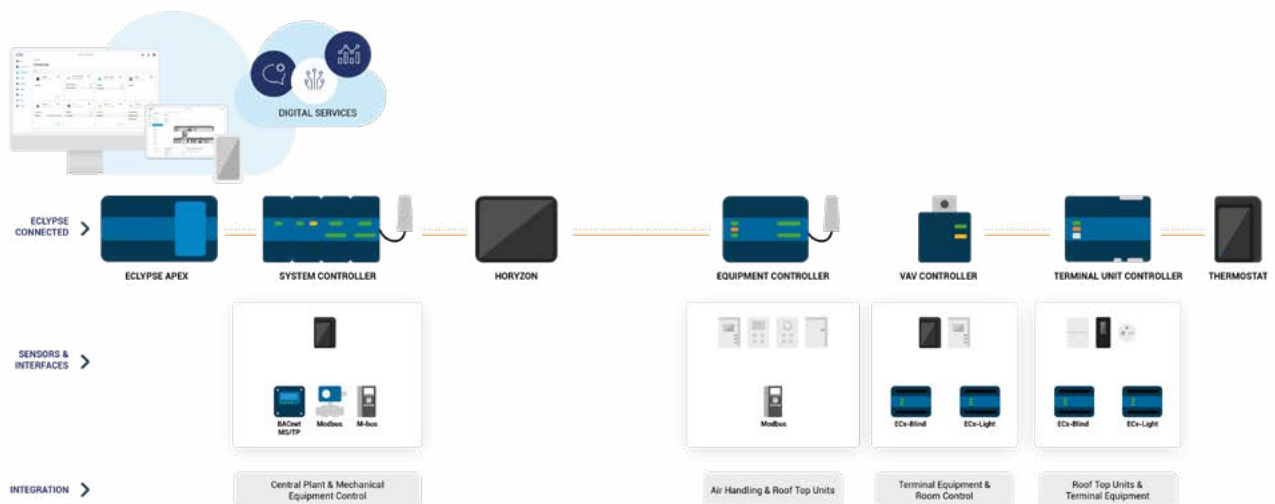

TRIDIUM

Distech Controls

Partnering with Distech Controls, Airmaster offers the ECLYPSE Building Intelligence and the EC-Net Supervisor platform to ensure the highest level of occupant satisfaction and minimal operational costs.

Distech Controls shares Airmaster's values and objectives in delivering innovative solutions that can provide better health, better spaces, and better efficiencies. A multi-vender solution with products that communicate via the most popular protocols (BACnet MSTP/IP, Modbus, Lon etc.) making it ideal for existing building upgrades.

Powered by the Niagara Framework, the platform also incorporates a suite of powerful controllers and web based graphical applications.

ECLYPSE Building Intelligence is an end-to-end software for system integrators, property owners and facility managers that efficiently deploys, operates and optimises sustainable, connected and autonomous buildings.

DISTECH CONTROLS™

PlantPRO

PlantPRO is an optimisation and control solution that reduces chiller plant energy use, resulting in significant cost-savings.

Airmaster is the exclusive Australian distributor of the award-winning central plant controls and optimisation solution PlantPRO. PlantPRO has been developed in Australia by Smart Building IoT Solutions company, Conserve It.

It is a complete, smart machine-learning hardware and software solution that enables optimisation and control of central plants, enabling energy savings, with verified case studies of up to 40% annual energy savings.

Using feedback from its on-board real time analytics, diagnostics, measurement and verification systems, PlantPRO has the ability to continually readjust the chiller plant for optimal performance.

- **Plant Diagnostics and Reporting**
- **Plant Control and Automation**
- **Plant Optimisation**
- **Plant Continuous Commissioning and Tuning**
- **Plant Performance Monitoring**
- **Plant Measurement and Verification**

PlantPRO®

Delivering Real Value Through Our Latest Technology Solutions

Airmaster remains a leader in the implementation of technology solutions in the built environment – evolving with the HVAC industry to introduce competitive technologies and systems that extend real value to our clients by delivering proven cost savings,real-time results and a fast return on investment.

This suite of technology services and solutions are tailored specifically to the needs of our clients. These include data analytics, smart building automation and eValuate – a fully-hosted solution in asset identification, life cycle and capital expenditure planning. These services are supported by our highly regarded approach to account management.
